VIGOR ELECTRIC

VS Series Controller Provides [Comprehensive] Control Application

More Effective

The VS Series is based on high performance 32-bit 96 MHz processor, the overall efficiency is 10 times more than the VB or VH series PLC.

The size of project memory is enlarged from 4~16K to 16~64K words, also the number of data registers is greatly increased.

The communication could expand up to 6 ports (USB and CP1~CP5 multi-functional ports), fully support high-level control system.

The 4 pulse out points have various positioning functions. The 8 high-speed inputs provide plenty functions such as external interrupt, hardware / software high-speed counter, pulse capture, period measurement, handwheel...

More Fast

The new processor only takes 0.15μs per basic instruction step, that performance is 2.5 times faster than before. Both the pulse inputs and outputs can reach 1 MHz, more powerful than similar competitor.

By superbly fast USB port to read or write the user project just spends in an instant, 16K Words less than 3 Sec. This progress far exceeds the past.

More Diverse

The VS Series has the VS1 (General), VS2 (Advanced), VSM (Motion Control) and VS3 (High Performance) Main Units. The applicable coverage is from simple to complicated control.

By various Main Units, Modules, Cards, Memory Cards and the modular design to produce a complete and flexible combination.

Remarkable add-on card structure with the DIO, Communication and Special Cards to provide a superb cost-effective, space saving and flexible expansion.

Simple to construct and maintain, this VS Series is the best choice of programmable logic controller.

More Competitive Advantage

The **VIGOR** R&D team has accumulated decades of experience for "More diverse combination" and "The most suitable product" design concepts. Carefully selected high quality CPU to develop the excellent and stable VS Series also with highly competitive price.

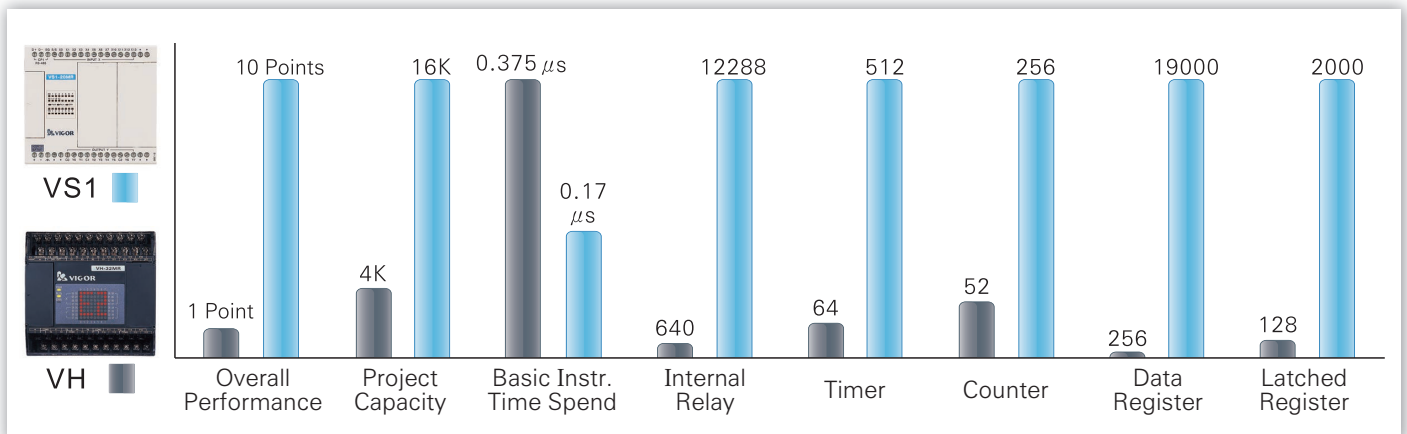

The VS Series is close to the automation market and demand by flexible combination. Can raise product level with expandability and more competitive.

* For the VSM-28ML-D Line Driver model, its two Hardware High-Speed Counters can count 1 MHz pulses respectively.

** Those 4 outputs are available generate 1 MHz pulses individually at the VSM-28-ML-D Line Driver model; 200 kHz at the VSM/VS3's NPN; 50 kHz at the VS1/VS2's NPN or 5 kHz at the PNP Main Unit. Not available in the relay output unit.

Quantum Leap Performance, High Cost-Effectiveness, Excellent Value

Speedy Programming USB Port

By the built-in 12Mbps USB interface, to read or write a user project can be finished in an instant (16K Words < 3 Sec.) This innovation also improves the monitoring efficiency, to monitor the PLC could have faster response and more components.

Using a standard mini USB 5-Pin cable to contact to a computer directly, away from the unfriendly adapter. Furthermore, VIGOR provides the VSPC-200A noise suppression USB cable that is designed for industrial environment use, could reduce the USB communication failed.

Diverse Combination Brings Competitive Advantage

- The simple flexible add-on DIO Expansion Card can avoid waste and save space, thus to make "The most suitable product".
- Various RS-485/232 communication, special function (analog, temperature, etc.) and small number DIO cards to meet expansion needs.

- Diverse 8, 16, 28 & 32-point DIO Expansion Modules provide the most satisfactory I/O expansion.
- The VS2, VSM and VS3 could join the analog input / output and temperature modules up, for accurately measure and control.

No battery required memory card for user project and large data storage; also the Real-Time Clock (RTC) function is available.

- The VS Series presents the VS1 General, VS2 Advanced, VSM Motion Control & VS3 High Performance PLCs. Suitable for applications from simple to complex.
- The VS Series offers flexible options: 16K~64K Word project memory, 10~512 I/O points, 2~6 Comm. ports and various special functions (analog, temp....).

Multi-Function Memory Card Provides the Best Data Transplant Mechanism

Multi-function memory card adopts no battery required Flash ROM. This card is like a PLC's hard disk to store a user project and large 655,360 Words latched data. The appropriate user project and relevant data (such as system setting, molding parameters, event records...) are all stored in the card. If the PLC Main Unit got failed, the user can quickly move the card into a new spare unit.

With the card, the maintenance work can complete by an ordinary trained worker, not necessary by a professional. It solves the problem of inconvenient maintenance if the controller fails.

Robust System Structure, Cautiously Protect Data and Intellectual Property

All the VS Series takes the no battery required FLASH ROM for its user project and latched area data, that could keep away from the disaster of lost resource data. The advantage will appear in a care shortage control system.

The Memory Card stores a user project and large latched data. By an appropriate user project and relevant data could easily move the process to another PLC, to reduce the difficulty of maintenance.

The Password function would restrict the permission to read the project, and furthermore provided the Disallow to Read function. On the other hand, the Project ID combines with the PLC ID could protect the benefit of designer advantageously. This VS Series to protect the intellectual property right is comprehensive.

More Communication Ports and Forms to Meet the Demand of Advanced System

The VS Main Unit built-in the USB programming port and a RS-485 multi-function communication port (CP1). By expansion cards could expand CP2 ~ CP5 multi-function communication ports (RS-232 or RS-485 interface selectable). Each multi-function communication port could individually appoint for the VS Computer Link, MODBUS, CPU Link, Non-protocol or other mode. The plenty ports can link with HMI, central supervisory system, distributed control system and peripherals to satisfy all kinds of applications in the control.

Through the MODBUS or VS protocol, the Slave PLC will respond the request from HMI or central supervisory system.

The MODBUS Master mode could actively link with various of peripherals.

The CPU Link mode via immediate data link between multiple PLCs to exchange data then achieve the distributed control objective.

New Windows® based programming software the Ladder Master S.

USB+CP1~CP5 communication ports

Use the VS Computer Link mode to establish a local network.

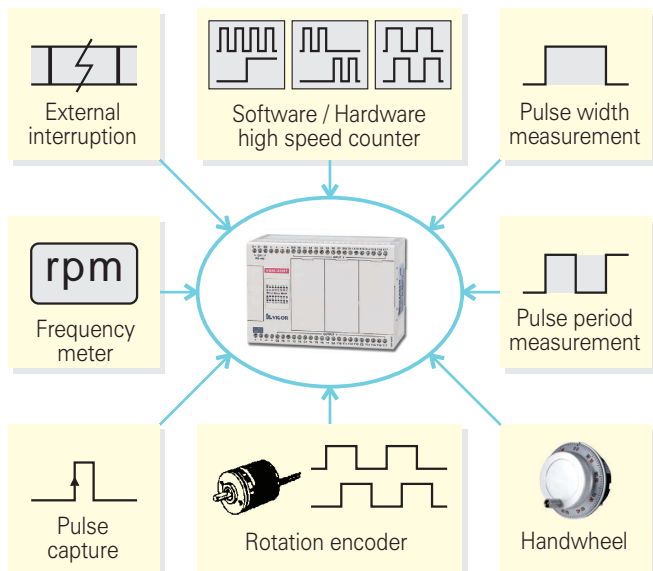

The VS PLC Series has the Non-Protocol communication, that can be linked to various peripheral in the market.

Multi-Function High Speed Input

The Main Unit has built-in 8 high-speed inputs (up to 1 MHz) for the external interrupt, pulse capture, frequency meter, pulse measurement, high speed counter, handwheel and other functions, to support various special applications.

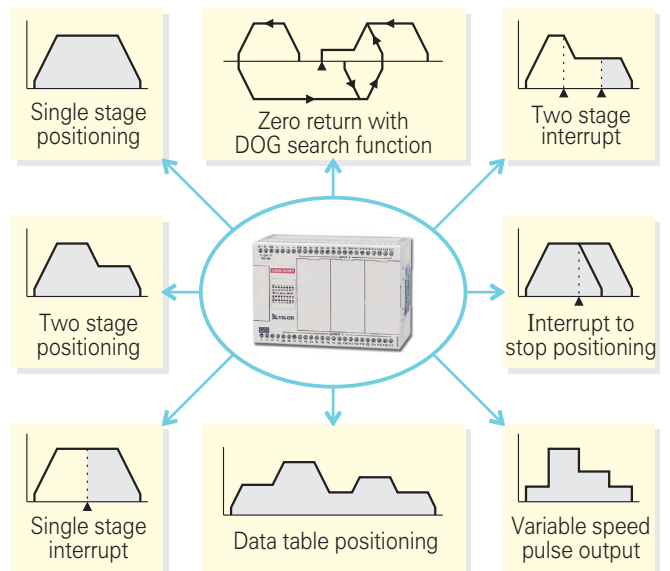

Available become 8 single-phase or 4 A/B-phase counters, furthermore can activate two A/B-phase hardware high speed counters HHSC1 / HHSC2 to improve the system efficiency.

Multi-Function High Speed Position Control

The VSM and VS3 series Main Unit built-in 4 high speed pulse outputs (up to 1 MHz) and various easy to use positioning instructions. Hence, can perform precision positioning control for step or servo motor drivers directly.

The VSM-28ML-D is to meet the requirement of easy connection if the encoders and motor drivers are using the line driver interface.

Bitwise Operation and Bit Index Functions

VS Series offers some advance that typically belongs to high-end PLC. The new functions provide more convenient and flexible usage for the program designer.

Practical and Various Special Function Cards --- High Cost-Performance Ratio

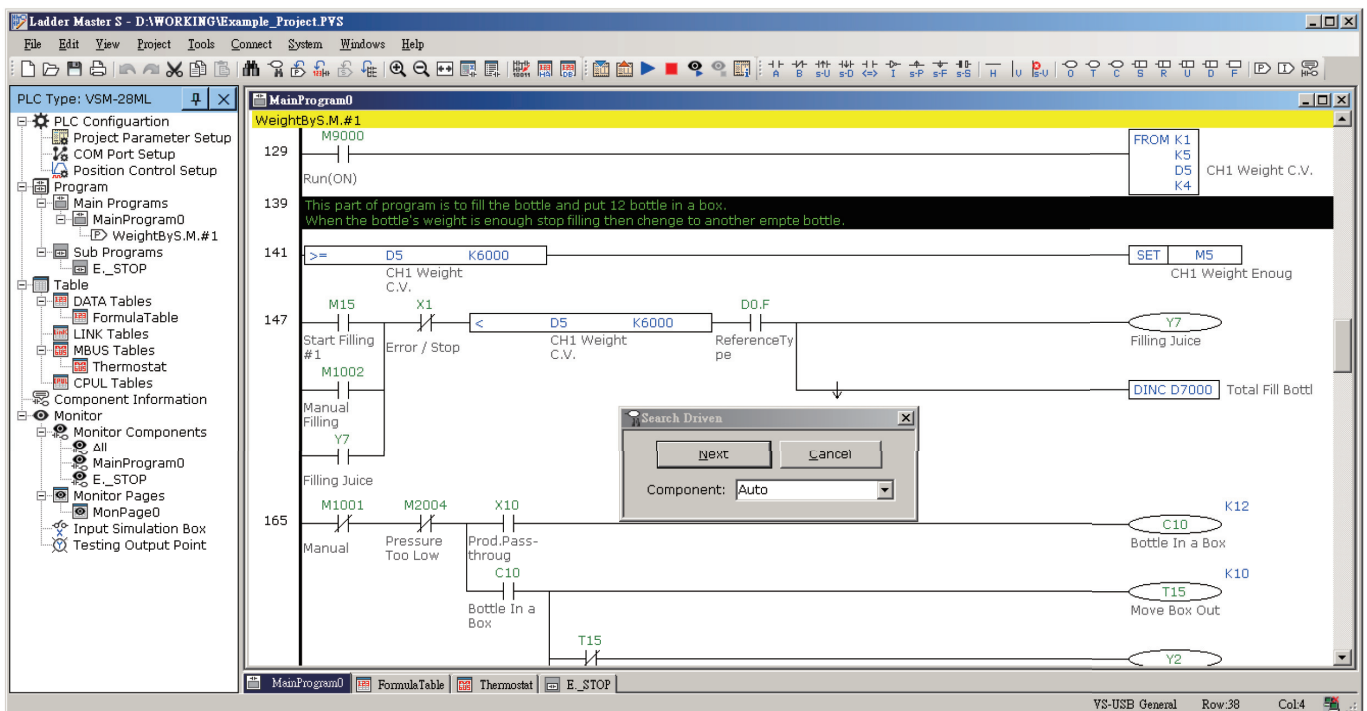

Highly Reliable Connector Models, Installation and Maintenance More Easier

To remove the unstable part (e.g., the AC power and load driving relays) out of the controlling core PLC is the most suitable structure in a control box. Which makes a safeguard mechanism, in order to build a highly reliable control system.

Using connectors join with exterior I/O devices can reduce the assembling time and wiring mistake, also improve work efficiency. If the controller is faulty and must be repaired or replaced, the connector has the advantage to quickly exchange also could avoid error and enhance service efficiency.

Technicality Specification

Common Specification

Item	Specification
Ambient	Work Temperature: 0 ~ 55 °C; Storage Temperature: -20 ~ 70°C; Humidity: 10 ~ 90% RH (at 25 °C / 77 °F, non-condensation)
Vibration Tolerance	10 ~ 55 Hz with amplitude of 0.075 mm; 55 ~ 150 Hz 1G acceleration at X, Y and Z axes for 80 min. (8 min. per cycle × 10 cycles)
Shock Tolerance	10 G, three times for each of X, Y and Z axes
Noise Immunity	Noise simulator: 1500 Vp-p; Pulse width: 1 μs, Frequency: 25 ~ 60Hz
Dielectric Strength	500V AC (between the ground and DC terminals); 1 min.
Insulation Resistance	> 5 MΩ; 500V DC (between the ground and DC terminals)
Grounding	Class-3 Grounding to the terminal of Main Unit then other expansions (Not to common grounding with heavy electric machinery)
Atmosphere	Keep away from corrosive gas or dusty environment; Pressure: 1080 to 795 hPa (equivalent to an altitude of -1000 to 2000 m)

Notes for Expansions

The VS Series is to enhance flexibility and reach “The most suitable combination”. Not only equipped with an ordinary Expansion Slot for modules, but also created the interface of Expansion Card Socket.

The Main Unit has the circuit for internal power supplying but the expanded modules and cards do not have, therefore all the power is from the Main Unit. Please pay attention to the power consumption, add the VS-PSD power repeater module is required if the power is insufficient.

• Notes for Expansion Card

- The Expansion Card Socket is in the front of Main Unit. It is not only to shrink the installation space, but also by various cards could provide small number DIO, communication port and special function expansion to reduce cost.
- VS PLC Series has 1~3 Expansion Card Sockets that depends on the type of different main units.
- VS1 series can use 1 special function card only; VS2, VSM or VS3 could use up to 3 special function cards.

• Notes for Expansion Module

- VS1 series:

VS1-10M, VS1-14M, VS1-20M or VS1-24M Main Unit is not provided with the module's Expansion Slot, so it can not connect to any expansion module.

VS1-28M or VS1-32M Main Unit equips a module's Expansion Slot for to connect with DIO expansion modules, but it is unable to use the special expansion module.

VS1 series PLC can use expansion modules to handle up to 64 input points (X0~X77) and 64 output points (Y0~Y77), total 128 I/O points.

VS1-28M or VS1-32MT-DI Main Unit will occupy the X0~X17 and Y0~Y17 I/O addresses, thus the beginning I/O addresses of the first expansion module are the X20 and Y20.

VS1-32M Main Unit will occupy the X0~X27 and Y0~Y17 I/O addresses, thus the beginning I/O address of the first expansion module are the X30 and Y20.

- VS2, VSM and VS3 series:

VSM-14M Main Unit is not provided with the module's Expansion Slot, so it can't connect to any expansion module. VS2, VSM or VS3 Main Unit equips a module's Expansion Slot, could connect with DIO expansion modules and special modules. (excluded VSM-14M)

VS2 or VSM Main Unit can use expansion modules to handle up to 128 input points (X0~X177) and 128 output points (Y0~Y177), total 256 I/O points. And also available to expand 8 special modules.

VS3 Main Unit can use expansion modules to handle up to 256 input points (X0~X377) and 256 output points (Y0~Y377), total 512 I/O points. And also available to expand 16 special modules.

VS2, VSM or VS3 Main Unit will occupy the X0~X17 and Y0~Y17 I/O address, thus the beginning I/O addresses of the first expansion module are the X20 and Y20.

- The VS-8XY expansion module will occupy 8 input and 8 output points.
- The VS-28XYR expansion module will occupy 16 input and 16 output points, in addition unable to expand any module through its right.

	VS3-32MT-DI	VS3 Main Unit: 16 DI (DC 24V, 4×200 kHz + 4×50 kHz); 16 DO (100mA NPN transistor, Y0~Y3 200 kHz); 64K words project memory; 3 Exp. Card sockets; DIO Exp. & 16 Special Modules available; I/O by IDC connector	E
DIO Expansion Module	VS-8X	DI Expansion Module: 8 DI DC 24V, Sink/Source selectable; input by screw-clamp terminal	D
	VS-16X	DI Expansion Module: 16 DI DC 24V, Sink/Source selectable; input by screw-clamp terminal	
	VS-8Y★	DO Expansion Module: 8 DO ★; output by screw-clamp terminal	
	VS-16Y★	DO Expansion Module: 16 DO ★; output by screw-clamp terminal	
	VS-8XY★	DIO Expansion Module: 4 DI DC 24V, Sink/Source selectable; 4 DO ★; I/O by screw-clamp terminal	
	VS-16XY★	DIO Expansion Module: 8 DI DC 24V, Sink/Source selectable; 8 DO ★; I/O by screw-clamp terminal	B
	VS-28XYR	DIO Expansion Module: 16 DI DC 24V, Sink/Source selectable; 12 DO (2A Relay); I/O by screw-clamp terminal	
	VS-32XY★	DIO Expansion Module: 16 DI DC 24V, Sink/Source selectable; 16 DO ★; I/O by screw-clamp terminal	
	VS-16X-I	DI Expansion Module: 16 DI DC 24V, Sink/Source selectable; input by IDC connector	F
	VS-16YT-I	DO Expansion Module: 16 DO (100mA NPN transistor); output by IDC connector	
	VS-16XYT-I	DIO Expansion Module: 8 DI DC 24V, Sink/Source selectable; 8 DO (100mA NPN transistor); I/O by IDC connector	
VS-32XYT-I	DIO Exp. Modul: 16 DI DC 24V, Sink/Source selectable; 16 DO (100mA NPN transistor); I/O by IDC connector		
Power Module	VS-PSD	Power Repeater Module: DC 24V input converts to DC 5V 500mA + DC 12V 800mA outputs for Modules' inner use	
Special Function Module	VS-4AD	Analog Input Module: 4 channel (16-bit) inputs, each channel could input either -10~+10V, 4~20mA or -20~+20mA; isolated; with an accurate calibration DC 10V output	D
	VS-2DA	Analog Output Module: 2 channel (16-bit) outputs, each channel could output either -10~+10V, 4~20mA or -20~+20mA; isolated	
	VS-3A	Analog I/O Module: 2 channel (16-bit) inputs + 1 channel (16-bit) output, each channel could input/output either -10~+10V, 4~20mA or -20~+20mA; isolated; with an accurate calibration DC 10V output	
	VS-6A	Analog I/O Module: 4 channel (16-bit) inputs + 2 channel (16-bit) outputs, each channel could input/output either -10~+10V, 4~20mA or -20~+20mA; isolated; with an accurate calibration DC 10V output	
	VS-4TC	Thermocouple Temperature Input Module: 4 channel (K, J, R, S, T, E, B or N type thermocouple) inputs, 0.1°C / 0.1°F resolution; isolated	
	VS-8TC	Thermocouple Temperature Input Module: 8 channel (K, J, R, S, T, E, B or N type thermocouple) inputs, 0.1°C / 0.1°F resolution; isolated	
	VS-2PT	PT-100 Temperature Input Module: 2 channel (3-wire PT-100) inputs, 0.1°C / 0.1°F resolution; isolated	
	VS-4PT	PT-100 Temperature Input Module: 4 channel (3-wire PT-100) inputs, 0.1°C / 0.1°F resolution; isolated

DIO Expansion Card: 4 DI DC 24V, Sink/Source selectable; 4 DO ★; I/O by screw-clamp terminal

Item	Model Name	Main Specification	Dim.
DIO Expansion Card	VS-4X-EC	DI Expansion Card: 4 DI DC 24V, Sink/Source selectable; input by screw-clamp terminal	G
	VS-8X-EC	DI Expansion Card: 8 DI DC 24V, Sink/Source selectable; input by screw-clamp terminal	
	VS-4Y★-EC	DO Expansion Card: 4 DO ★; output by screw-clamp terminal	
	VS-8YT-EC	DO Expansion Card: 8 DO (DC 24V, 300mA NPN transistor); output by screw-clamp terminal	
	VS-4XY★-EC	DIO Expansion Card: 2 DI DC 24V, Sink/Source selectable; 2 DO ★; I/O by screw-clamp terminal	
	VS-8XY★-EC	DIO Expansion Card: 4 DI DC 24V, Sink/Source selectable; 4 DO ★; I/O by screw-clamp terminal	
	VS-8XI-EC	DI Expansion Card: 8 DI DC 24V, Sink/Source selectable; input by IDC connector	I
	VS-8YTI-EC	DO Expansion Card: 8 DO (DC 24V, 100mA NPN transistor); output by IDC connector	
Comm. Expansion Card	VS-485-EC	RS-485 Communication Expansion Card: One non-isolated RS-485 port with TX / RX indicators; dist. 50m Max.	G
	VS-485A-EC	RS-485 Communication Expansion Card: One isolated RS-485 port with TX / RX indicators; dist. 1000m Max.	
	VS-D485-EC	RS-485 Communication Expansion Card: Dual non-isolated RS-485 ports with TX / RX indicators; dist. 50m Max.	
	VS-D485A-EC	RS-485 Communication Expansion Card: Dual isolated RS-485 ports with TX / RX indicators; dist. 1000m Max.	
	VS-D232-EC	RS-232C Communication Expansion Card: Dual non-isolated RS-232 ports with TX / RX indicators; dist. 15m Max.; wiring by the RX / TX / SG terminals	
	VS-D52A-EC	RS-485 + RS-232C Communication Expansion Card: One isolated RS-485 port (1000m) & one non-isolated RS-232C port (15m), both with TX / RX indicators and wiring by terminals	
Special Function Card	VS-3AV-EC	Brief Voltage I/O Card: 2 channel (0 ~ 10V, 12-bit) inputs; 1 channel (0 ~ 10V, 10-bit) output; with an accurate calibration DC 10V output; non-isolated	H
	VS-4AD-EC	Analog Input Card: 4 channel (12-bit) inputs, each channel could input either -10~+10V, 4~20mA or -20~+20mA; non-isolated	
	VS-2DA-EC	Analog Output Card: 2 channel (12-bit) outputs, each channel could output either -10~+10V, 4~20mA or -20~+20mA; non-isolated	
	VS-4A-EC	Analog I/O Card: 2 channel (12-bit) inputs + 2 channel (12-bit) outputs, each channel could input/output either -10~+10V, 4~20mA or -20~+20mA; non-isolated	
	VS-3ISC-EC	Inverter Speed Control Card: 3 channel (0.1% resolution) voltage outputs; totally isolated for each channel	
	VS-2TC-EC	Thermocouple Temperature Input Card: 2 channel (K, J, R, S, T, E, B or N type thermocouple) inputs, 0.2~0.3°C resolution; non-isolated	
	VS-4TC-EC	Thermocouple Temperature Input Card: 4 channel (K, J, R, S, T, E, B or N type thermocouple) inputs, 0.2~0.3°C resolution; non-isolated	
	VS-1PT-EC	PT-100 Temperature Input Card: 1 channel (3-wire PT-100) input, 0.1°C resolution; non-isolated	
	VS-2PT-EC	PT-100 Temperature Input Card: 2 channel (3-wire PT-100) inputs, 0.1°C resolution; non-isolated	
Memory Card	VS-MC	Memory Card: No battery required 16Mb Flash ROM for user's project and data-bank (655,360 words) storage	
	VS-MCR	Multi-Function Memory Card: 16Mb Flash ROM for user's project and data-bank (655,360 words) storage; with the Real Time Clock function	
Connection Cable	VSPC-200A	USB Reinforced Cable: Between a PLC's Mini USB Programming Port and computer's A-type USB; length: 200 cm	
	VSEC-050	Extension Cable: For the Expansion Slot of the VS series; length: 50 cm	
	VSEC-100	Extension Cable: For the Expansion Slot of the VS series; length: 100 cm	
IDC Connector Related Accessory	VB-T8R	8 Relays Output Module: 16A 1c contact relays; with varistors and relay sockets	—
	VB-T8RS	8 Relays Output Module: 5A 1a contact relays; with 5mm pluggable screw-clamp terminals	
	VB-T8M	8 MOSFETs Output Module: 2A current source MOSFETs; with flyback diodes	
	VB-T16M	16 MOSFETs Output Module: 2A current source MOSFETs; with flyback diodes	
	VB-T16TB	16 Points Adapted Board: Transfer between the IDC connectors and screw-clamp terminals	
	VBIDC-□□□	IDC Ribbon Cable: Assembled with two 10-pin female connectors; length□□□:50/100/150/200/250/300 cm	
	VB IW-□□□	IDC's Dispersed Wires: An IDC female connector with 10 rainbow 22 AWG wires; length□□□:50/100/200/300 cm	
	VBIDC-FC100	10-pin Ribbon Cable: Flat, Grey, 28 AWG; length: 100 foot	
	VBIDC-FC250	10-pin Ribbon Cable: Flat, Grey, 28 AWG; length: 250 foot	
	VBIDC-HD20	10-pin IDC Connector: Female connector with strain relief, Grey, 20 pcs.	
	VBIDC-HD100	10-pin IDC Connector: Female connector with strain relief, Grey, 100 pcs.	
	VB-HT214	Crimping tool: Merge the IDC connector and ribbon cable	

★ Selectable output:

R: 2A Relay

T: 0.5A NPN transistor, Y0~Y3 can generate pulses (VS1 / VS2: 50kHz; VSM / VS3: 200kHz); EC cards are 0.3A only

P: 0.5A PNP transistor, Y0~Y3 can generate 5kHz pulses

All Main Unit, Special Module, VS-PSD & IDC's output are required DC 24V -15~+20% power input
